

What is a shooting star?

A shooting star is not a star
It's not a star at all
A shooting star's a meteor
That's heading for a fall

A shooting star is not a star
Why does it shine so bright?
The friction as it falls through air
Produces heat and light

A shooting star, or meteor
Whichever name you like
The minute it comes down to Earth
It's called a meteorite

A shooting star is not a star
It's not a star at all
A shooting star's a meteor
That's heading for a fall
A shooting star is not a star
Why does it shine so bright?
The friction as it falls through air
Produces heat and light
A shooting star or meteor
Whichever name you like
The minute it comes down to Earth
It's called a meteorite
It's called a meteorite...

They Might Be Giants
